Complete Software Solutions For Education

S-School Management System

Actionable Solution for
Enhanced Performance

S-SMS™ Signum School Management System is a Web-based Application with powerful, fully integrated school administrative software suite developed for Schools - large, small, public or private. This Software offers comprehensive functionality covering the complete spectrum of the schools tasks and roles. The solution is modular based and has many modules that allow the management, teachers & clerks to perform their roles.

This application supports all kind of the department of the school to maintain the students information like student admission & fees receipt, examination marks entry & result, events like examination schedule ,time table, college financials, Library management, etc... And generate relative all reports.

Features: School Management Software is a web based & window based application in which users can access anywhere anytime. SMS allows you to store modify and retrieve information using the pull down menus for all the modules. The software includes many modules like:

- Refund Security Deposit Entry

- Admission Alert, Fees Alert
- Parent/Teacher Meetings
- Outstanding Fees / School Trips

- Event Reminders
- Exams / Results
- Emergency Alerts Etc

Noted: Need to purchase SMS package for use.

E-mail Broadcast

Emails are delivered extremely fast when compared to traditional post. Emails can be sent 24 hours a day, 365 days a year. You can be sure that your message will reach your audience within minutes if not seconds. It will not take any charges.

Biometrics System

Biometrics based time and attendance terminals are becoming increasingly popular in today's market because of their many benefits (and, let's face it, hand or face scanning equipment is just pretty awesome). Because biometrics terminals read a person's unique fingerprint, iris, hand shape, or face shape, they ensure that employees cannot clock in for one another, thereby preventing employee time theft.

GPS Tracking with Video

A GPS tracking unit is a device, normally carried by a moving vehicle or person, that uses the Global Positioning System to determine and track its precise location, and hence that of its carrier, at intervals. This technology will help for Schools to track their buses by route, speed, fuel control and live video inside the buses.

- CCTV Camera.
- Biometrics System.
- Speed Control.
- Fuel Control.
- RFID System.

RFID Alert System

Radio-Frequency Identification (RFID) is the use of radio waves to read and capture information stored on a tag attached to an object. A tag can be read from up to several feet away and does not need to be within direct line-of-sight of the reader to be tracked.

ENTERPRISE EDITION
